2014 St. Johns River Water Management District Water Utility Rate Survey

Introduction

This survey covers rates taking effect during fiscal year 2014 (October 1, 2013, through September 30, 2014) for cities and counties within the St. Johns River Water Management District (SJRWMD).

The current sample includes 50 systems or subsystems that account for more than 90% of the water supplied by public utilities in SJRWMD. Most utilities that pump more than 2 million gallons per day are included.

Rates and example monthly bills for potable residential, potable commercial, potable irrigation, and reclaimed water are provided for each listed utility system. Example bills for residential and commercial potable water include combined water and wastewater bills, as well as breaking out the cost of water by itself. Rates within city limits are used for municipal systems having different rates outside of the city limits.

Later sections of this report provide various summaries of billing information, including average bills for each of the four types of water use, average cost per 1,000 gallons, and comparisons of residential potable bills for 6,000, 15,000, and 30,000 gallons of water use per month.
