Benchmark Farms Program  
Summary of Agricultural  
Pumpage Data Through 1988

by

Vince Singleton

Division of Resource Evaluation  
Department of Water Resources

St. Johns River Water Management District  
Post Office Box 1429  
Palatka, Florida 32078-1429

July 1988

## Purpose

Enclosed in this document is agricultural water use information collected from 1982 thru 1988. The information contained is actual field-measured data collected as part of the District's Benchmark Farms Program (Agricultural Irrigation Monitoring). The main goal of this program is to provide ranges of actual crop water use. The information is presented alphabetically by crop in Tab 1 thru Tab 8. The crops considered are: Blueberries; Cabbage; Citrus; Fern; Flowers/Foliage; Golf Courses (turf grass); Potatoes; and Woody Ornamentals. On some sites you will notice data quality that is described as inaccurate and unconfirmed. This is mainly the result of malfunctioning monitoring equipment. Some information is lost because irrigation monitoring equipment can not be repaired or replaced immediately.

THE FOLLOWING SITES ARE IRRIGATED BLUEBERRIES AND CHARACTERIZE  
THE CONTENTS OF TAB #1:
